

AMAT 100: Pre-Calculus

Departmental Syllabus

This is a dynamic document subject to updates. Any major changes will be communicated.

Pre-Calculus is a coordinated course. This syllabus contains information shared across all sections. Your instructor will also provide a syllabus supplement that contains information specific to your section.

Course Coordinator:

Dr. Luciano Medina, PhD

Office: Hudson 209

lmolina2@albany.edu

Course Description

This course provides a background in those topics that are needed for success in calculus and in understanding real world phenomena through mathematics. The course begins with a study of functions, their composition, transformations, and inverse. It then proceeds with developing an understanding of both the geometric and algebraic properties of the five fundamental functions (polynomial, rational, exponential, logarithmic, and trigonometric functions), solving equations involving such functions, and with an emphasis on their usefulness for problem solving and modeling real-world situations

General Education and Prerequisites

AMAT 100 fulfills 3 credits of the General Education Requirement.

Three years of high school mathematics or permission of the Mathematics Department is a prerequisite for this course.

Recommended Textbook

Precalculus 2e by OpenStax

(Freely available for download at <https://openstax.org/details/books/precalculus-2e>)

Learning Outcomes

By the end of the course students will be able to:

- Perform algebraic manipulations and solve equations involving polynomial, exponential, logarithmic, and trigonometric expressions.

- Analyze and interpret the properties of polynomial, exponential, logarithmic, and trigonometric functions, including domain, range, asymptotes, and end behavior.
- Apply transformations (translations, reflections, stretches, compressions) and perform algebraic operations (addition, subtraction, multiplication, division, composition) on functions.
- Solve real-world problems in fields such as engineering and science by applying precalculus concepts and techniques (e.g., modeling with functions, analyzing rates of change, solving optimization problems).
- Effectively convey mathematical ideas, including the ability to comprehend, construct, and evaluate mathematical arguments.

Course Structure and Assessments

The course blends interactive lectures with hands-on practice to help students master essential mathematical concepts.

- **Lectures:** Active participation and problem-solving are emphasized in two 80-minute sessions held each week.
- **Online Homework:** Regular assignments are designed to reinforce students' understanding of calculus concepts and techniques, and to help them identify areas for further review.
- **Quizzes:** Periodic quizzes are formative assessments that test students' comprehension of current material, ensuring their engagement and providing exam-like experience.
- **Exams:** Students' understanding will be evaluated through two midterm exams and a **required** cumulative final exam.
- **In-class Active Learning:** Active learning requires student participation and completion of collaborative exercises developed for students to apply their understanding, practice communicating mathematical arguments, and receive immediate feedback.

Comprehensive Assessments: Exams will draw upon concepts covered in lectures, online homework, quizzes, and in-class work, providing a well-rounded assessment of students' learning.

Homework

Regular online homework assignments are due at 11:59 PM on their assigned dates (see the course Lecture Schedule).

- **Submissions:** There are 10 submissions for open-ended questions. Multiple-choice questions have limited submissions (typically one or two fewer than the number of answer choices).
- **Late Passes:** All students have 5 "Late Passes" to extend homework deadlines *one week*. Use these strategically when you need extra time due to a busy week or unexpected challenges.

Late Passes offer students flexibility and aid in effective workload management throughout the semester.

The lowest two homework scores will be dropped.

Quizzes

Periodic quizzes will be administered throughout the semester as listed on course the Lecture Schedule. Quizzes are formative assessments to test students' understanding of the material. The purpose of quizzes is to ensure students are understanding the material currently being covered and discussed in class and to ensure they are involved throughout the semester. In addition, the quizzes will allow students to experience an exam-like environment.

In-Class Active Learning

Success in mathematics requires more than computational memorization; it demands the ability to formulate and communicate logical mathematical arguments. To foster these skills, 10% of your grade is dedicated to collaborative in-class activities. During lectures, we will engage in problem-solving exercises designed for you to apply your understanding, practice communicating mathematical arguments, and receive immediate feedback. Because these exercises require active, synchronous collaboration, they cannot be replicated outside of the classroom. *Consequently, missed work cannot be made up except in the case of formal, university-approved absences. Consistent participation is essential to your success in this course.*

Grade Calculation

Students' final numeric course grades are determined using the following formula:

10% In-Class Active Learning, 10% Quiz, 10% Homework, 20% Exam 1, 20% Exam 2, 30%

*Final Exam

*A student who passes the final exam with a 50% or higher is awarded at least a passing grade ('D') for the course even if their numeric grade is below a 50.

We will convert Numeric Grades to Letter Grades based on the table:

Grade	A	A-	B+	B	B-	C+	C	D	E
Range	[100, 90]	(90, 87]	(87, 83]	(83, 80]	(80, 75]	(75, 70]	(70, 60]	(60, 50]	<50

Attendance Policy

Students are expected to attend all scheduled classes. Your attendance is crucial not only for your own learning and success but also for creating a productive and engaging environment for all students in the class.

Our course policy is that if a student fails to attend at least 75 percent of the total class sessions, the instructor may exercise the option to fail that student or decrease their final course letter grade by one full letter grade.

Exam Policies

There are two midterm exams and a final exam during the semester. The dates of these exams are listed on the course lecture schedule with the exception of the final exam, which is determined by the registrar and published after the mid-point of the semester.

The purpose of the exams is to test students' understanding of the course material in a summative, holistic approach. Some problems may involve multiple concepts.

During exams, NO CALCULATORS, no cell phones, iPads or other devices that can communicate with the internet or with others may be used. Any such equipment found with the power on may well be interpreted as “cheating”. The Department of Mathematics and Statistics reserves the right to impose the strongest academic sanctions for violations of Academic Integrity. See the policy on Academic Integrity below.

Out-of-sequence exams will only be accommodated in the following cases:

- A documented medical excuse.
- A University sponsored event such as an athletic tournament, a play, or a musical performance. Athletic practices and rehearsals do not fall into this category. Please have your coach, conductor, or other faculty advisor contact your instructor.
- A religious holiday.
- Extreme hardship such as a family emergency.
- We will not be able to accommodate out-of-sequence exams for purposes of more convenient travel, including already purchased tickets.

Scheduled out-of-sequence exams (those not arising from emergencies) must be taken before the actual exam. **Make-up exams must occur within one week of the regularly scheduled exam, otherwise a zero score will be given.**

If you missed an exam for any of the above reasons, notify the course instructor immediately.

Other Important Information

Academic Integrity

All students are expected to abide by the UAlbany Standards for Academic Integrity to be found in the [Standards of Academic Integrity](#) page. Academic integrity is part of your reputation as a responsible student and adult. Violations of the policy are a breach of the trust between professor and student. It is unfair to your fellow students, to the faculty, and to yourself.

Academic integrity violations include:

- Copying answers from computational tools or large language models (e.g., Wolfram Alpha, Symbolab, ChatGPT). While technology can be used to check work, submitting unoriginal solutions undermines the learning process.
- Copying answers from other websites (e.g., Chegg, Math Stack Exchange, Yahoo! Answers). Graders and instructors can detect copied work, and students who bypass the objectives of the homework process often perform poorly on quizzes and exams.
- Sharing answers with other students.
- Having another person take a quiz or exam on your behalf.
- Altering graded work to inflate scores.
- Fabricating excuses or forging documentation for make-up exams.

This list is not exhaustive. Submitting unoriginal work with intent to deceive prevents the instructor from evaluating a student's learning and typically results in a zero score, along with a report to the relevant dean for disciplinary action.

AI Policy

AI can be a powerful ally in your learning journey. Think of it as a study partner—a tool to help you **check your work, explore different approaches, and delve deeper into the "why"** behind solutions. The goal is to let it enhance your understanding, not replace your own effort. Always try solving problems independently first, then use AI for support and verification.

Acceptable Uses of AI

- **Checking your work:** After you've completed a problem, use an AI tool to confirm your final answer or to review the steps of a solution.
- **Exploring different methods:** If you're stuck, ask an AI to provide an alternative way to solve a problem. This helps you see how different concepts connect.

- **Deepening your understanding:** Use AI to ask "what if" questions or to get a simplified explanation of a complex topic or theorem. For example, "Explain the chain rule using a real-world analogy."

Unacceptable Uses of AI

The work you submit in this course must be a genuine reflection of your own learning and problem-solving skills. Using AI to generate solutions for assignments, quizzes, or exams without first attempting the problem yourself is a violation of academic integrity. **Submitting AI-generated work as your own is strictly prohibited.**

Disability Disclosure Statement

Reasonable accommodations will be provided for students with documented physical, sensory, systemic, medical, cognitive, learning and/or mental health (psychiatric) disabilities. If you believe you have a disability and require accommodation in this class, please register with Disability Access and Inclusion Student Services (DAISS). You can contact DAISS at daiss@albany.edu, 518-442-5501 or www.albany.edu/disability. Once you have registered with DAISS, they will provide you with an accommodation letter that you can send to your instructors to receive your approved accommodation.

Basic Needs Statement

It is difficult to succeed academically if you don't have enough to eat, a safe place to live and sleep, or are struggling with an unforeseen emergency. Knowing the resources available on your campus to help you succeed is key! If you need help meeting these or other basic needs, please seek assistance from Supplemental Support Services in the Dean of Students Office. View the basic needs assistance offerings at <https://www.albany.edu/dean-students/supplemental-support-services>. While you're there, see the variety of helpful services available to you at the Dean of Students at <https://www.albany.edu/dean-students>. Resources and reporting links can be found on both of these websites.

Mental Health Resources

As a student, there may be times when personal stressors interfere with your academic performance and/or negatively impact your daily life. The University at Albany Counseling and Psychological Services (CAPS) provides free, confidential services including individual and group psychological counseling and evaluation for emotional, social and academic concerns. Students may consult with CAPS staff

remotely by telephone, email or Zoom appointments regarding issues that impact them or someone they care about.

- For questions or to make an appointment, call (518) 442-5800 or email consultation@albany.edu. Visit www.albany.edu/caps for hours and additional information.

- If your life or someone else's life is in danger, please call 911. If you are in a crisis and need help right away, please call the National Suicide Prevention Lifeline at 988.

- Students dealing with heightened feelings of sadness or hopelessness, increased anxiety, or thoughts of suicide may also text "HOME" to 741741 (Crisis Text Line).
